EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Christopher Korff on 8/16/10.

The application has been amended as follows:

Claim 1:

(1) Please change "E) and F), wherein component C) is at least one component selected from the group of a catalyst, a sensitizer and a radical initiator," as found on lines 8 and 9 of claim 1 to --E) and F), wherein component C) is a catalyst,--

(2) Please change "where component D) is at least one pressure sensitive adhesive, with the proviso that if the pressure sensitive adhesive is an organosilicone compound," as found on lines 10-12 of claim 1 to --where component D) is at least one organosilicone pressure sensitive adhesive, wherein--.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: The prior art rejections made in the previous Office action have been withdrawn in view of Applicants amendments.

Greenberg et al. (US Pat. 6,387,487) was relied upon to reject previously presented claims 1, 3, 5-8, 11 and 13-17. Newly added claim 19 includes the limitations from previously presented claims 1, 3, 5 and 10 (claim 10 was not included in the Greenberg et al. rejection). Greenberg et al. can not be used to reject the instant claims since the minimum amount of component D as taught by Greenberg et al. is at least three times more than the maximum amount required by instant claim 1. Given the end use of Greenberg et al. (pressure sensitive adhesives), there would be no motivation to a person having ordinary skill in the art to lower the amount of component D, since the MQ resin is required to achieve adhesion. Lowering the

amount of component D would yield a releasing film, which is contrary to the desired end use of the compositions taught by Greenberg et al. (i.e., pressure-sensitive compositions).

The prior art references Ballard (US Pat. 3,527,655) in view of Ko et al. (US Pat. 5,308,887) was used to reject previously presented claims 1, 3, 6-8, 10, 11 and 14-17. Newly added claim 19 includes the limitations from previously presented claims 1, 3, 5 and 10 (claim 5 was not included in the Ballard/Ko et al. rejection). Neither Ballard nor Ko et al. satisfy the limitation that component D is selected to be non-reactive with respect to components A and B as required by the instant claims. The silicone resins [component D] taught by Ballard are required to have the same alkenyl functionality as component A. In so doing, the silicone resin taught by Ballard reacts with the siloxane crosslinking agent in the same manner as component A of the instant claims and therefore cannot be described as a non-reactive polyorganosiloxane.

The siloxane compositions as claimed are not taught or suggested in the prior art. While polysiloxane compositions having components A, B and C are known in the art, the inclusion of a non-reactive silicone resin in relatively small amounts (0.01 to 10 parts of component D relative to 100 parts of components A and B) which has greater than 10 mol% of D units is not known. Those compositions taught in the art which comprise components A through C which further teach the addition of silicone resins only suggest the employment of silicone MQ resins which are typically employed in large amounts (that is, greater than 100 parts of MQ resin per 100 equal parts of components A and B). Such silicone MQ resins cannot be used to teach or render obvious component D of the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
